

## i.ScoopShower

### Spray rinsing units, spray rinsing devices and rinsing containers

Many of the usual scoop rinsers used leave much to desire with respect to the hygiene requirements – especially in summer, impureness find rich feeding grounds here. Dirty rinsing water passes from the scoop to the ice cream. On the other hand pure through-flow systems have high water consumption and so involve high costs.

### Function & customer benefits

**i.ScoopShower – our spray rinsing devices for ice-cream scoops are the perfect solution:**

#### Function

- The water valves at the top and bottom are opened by pressing the disher on the spherical head. The disher is always rinsed with fresh water from above and below. Dirty washing water runs away immediately. The water on the inside of the scoop is swirled around. This rinses off the food residuals.
- On removing the scoop from the spherical head the water valves are automatically closed again by the water pressure.

#### Less water consumption – greater economic efficiency

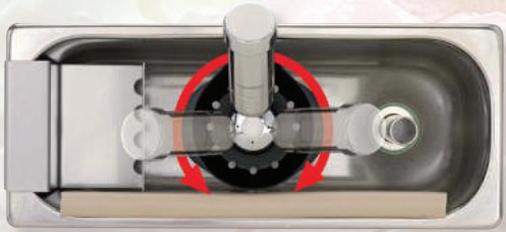

- Use of an automatic shut-off valve enables in average more than 50% water savings to be achieved compared to systems with continuous water flow.

#### More hygiene – improved quality

- The disher or ice-cream scoop is always rinsed with fresh water from above and from below. Dirty washing water runs away immediately.

## i.ScoopShower

**Spray rinsing units, spray rinsing devices and rinsing containers**

Flexible mounting position – 360°!

Smart German  
Design

### Function & customer benefits

#### Special features & news

##### · **Elegant design – more comfort**

Our product lines i.ScoopShower Exclusive and Exclusive Plus come with a holder for wall attachment with rounded corners. The elegant design contributes to creating a pleasant atmosphere in the shop and increases comfort in the working environment.

##### · **Tap-off section – removable**

After rinsing the scoop the tap-off section made of rubber-like material helps to remove the remaining drops of water. Tapping off the water ensures that it doesn't get into the ice cream. This prevents the formation of ice crystals which change the taste. An unhygienic sponge is no longer required.

##### · **Straining disc – removable**

##### · **Scoop drain insert – removable**

##### · **Integrated water-jet adjustment at upper shower head**

##### · **Integrated automatic waterstop**

##### · **Integrated water-backflow-preventer**

#### Flexibility

- Various models for all stationary and mobile requirements.
- This system of course also unfolds its benefits for all proprietary types of ice-cream scoops.

#### Reliability

- i.ScoopShower is manufactured from high-quality precision parts and has been sold to thousands of satisfied customers.

#### Installation / water connection

- Fits in every work counter / cabinet (standard sizes)
- Easy connection to water supply mains

# i.ScoopShower

## The i.ScoopShower Silver WATERSTOP with integrated automatic waterstop

Adjustable water-jet

### Integrated water-jet adjustment at upper shower head

On one hand the water jet from below shall be as strong as possible in order to ensure a maximum rinsing result with regard to the messy inner bowl of the scoop. Therefore an adjustment respectively the reduction of the water jet from below is not necessary. On the other hand the water jet from above shall be adjustable in order to avoid water splashing around from the outer bowl of the scoop while still achieving a good rinsing result from outside. The water-jet adjustment on top of the upper shower head meets this requirement.

Smart German Design

### integrated automatic waterstop

Inside the lower tube of the spray rinsing unit we built in an automatic waterstop, which closes automatically when turning off the spray heads. This enables a comfortable and easy cleaning of the spray rinsing unit even from inside without requiring to disassemble the complete unit. Also here we paid attention to the details: The gaskets are clipped onto the valve plate and won't get lost easily!

Automatic waterstop for easy cleaning

## Function & customer benefits

### Elegant design – more comfort

Our product lines i.ScoopShower Exclusive and Exclusive Plus come with a holder for wall attachment with rounded corners. The elegant design contributes to creating a pleasant atmosphere in the shop and increases comfort in the working environment.

### Straining disc (removable)

The straining disc serves to collect e.g. pieces of chocolate, nuts, fruits in order to avoid the water outlet from being blocked. Furthermore it additionally bubbles up the water which increases the rinsing effect.

### Scoop drain insert (removable)

The scoop drain insert can be easily clipped into our rinsing containers and serves as a clean drip drain deposit for rinsed scoops while keeping sufficient distance from the bottom of the rinsing container.

### Integrated water-backflow-preventer

Below the automatic waterstop there is a water-backflow-preventer. This means an additional protection.

### Compact one-piece valve assembly for comfortable and easy cleaning

The compact one-piece valve assembly enables a comfortable and easy cleaning of the spray rinsing unit even from inside without requiring to disassemble the complete unit. Also here we paid attention to the details: The gaskets are clipped onto the valve plate and won't get lost easily!

### Tap-off section – removable

After rinsing the scoop the tap-off section made of rubber-like material helps to remove the remaining drops of water. Tapping off the water ensures that it doesn't get into the ice cream. This prevents the formation of ice crystals which change the taste. An unhygienic sponge is no longer required.

Einbauposition variabel – 360°!  
Flexible mounting position – 360°!

## i.ScoopShower

### ROUND spray rinsing devices for ice-cream scoops

Many times there's only little space left on the work counter. Therefore we have extended our product lines spray rinsing devices for ice-cream scoops and dishes i.ScoopShower Silver & Silver WATERSTOP. In addition to our well-known models we offer you these units now combined with very small round containers as fit-in and add-on versions.

### Function & customer benefits

### ROUND spray rinsing devices for ice-cream scoops

Despite the very small interior diameter of only approx. 120 mm of the new round container the mounting position of the spray unit remains absolutely flexible. The spray heads can still be turned 360° and disassembled - e.g. still enabling easy access and a comfortable cleaning of the container or the spray rinsing unit itself (in case of i.ScoopShower Silver WATERSTOP even without having to shut-off the water inlet separately).

## i.ScoopShower Exclusive & Exclusive Plus

Function & customer benefits

### Presentation & customer benefits

Our product lines i.ScoopShower Exclusive and Exclusive Plus come with a holder for wall attachment with rounded corners. The elegant design contributes to creating a pleasant atmosphere in the shop and increases comfort in the working environment.

**For highest requirements!**

More comfort for your working environment!
